DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-35 and 41-43 drawn to a pin member body for measuring bending strain in a bending portion, classified in class 73, subclass 761.
 - II. Claims 35, drawn to drawn to a pin member body for measuring bending strain in a bending portion comprising a switching device, classified in class 73, subclass 769.
 - III. Claims 36-40, drawn to drawn to a pin member body for measuring bending strain in a bending portion comprising a data receiving device, classified in class 73, subclass 769.
 - IV. Claims 44-56 drawn to drawn to a pin member body and the method for measuring bending strain in a bending portion comprising two different sensing configurations, classified in class 73, subclass 767.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II, or III or IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because, as an example, the existence of either a switching device, a data receiving device or two

different sensing configurations is neither necessary nor essential in each one of the above recited combinations as recited in claim 1. The subcombinations have separate utility such as switching in and out of the sensing mode, data receiving capabilities, and multiple sensing capabilities to detect both the bending stress and the net axial stress.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, or III or IV, restriction for examination purposes as indicated is proper. A telephone call was made to Joseph Walkowski on February 6, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143). Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventor's is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
